1 Introduction

Topological indices are widely used to determine the correlation between the specific properties of molecules and the biological activity with their configuration in the study of quantitative structure-activity relationships (QSARs). In the field of computational chemistry interest in topological indices which capture the structural essence of compounds has been increasing for present time. The interest in topological indices is mainly related to their use in quantitative nonempirical structure-property relationships and quantitative structure-activity relationships [1]. The well-known Zagreb indices introduced in [2],[3] are among the most important topological indices. The first and second Zagreb indices M_1 and M_2 , respectively, are defined for a molecular graph G as:

$$M_1(G) = \sum_{v \in V(G)} \delta_G^2(v) = \sum_{uv \in E(G)} [\delta_G(u) + \delta_G(v)], \quad M_2(G) = \sum_{uv \in E(G)} \delta_G(u) \delta_G(v),$$

The first and second Zagreb coindices have been introduced by A.R. Ashrafi, T. Doslic, and A. Hamzeh in 2010 [4]. They are respectively defined as:

$$\overline{M}_1(G) = \sum_{uv \notin E(G)} [\delta_G(u) + \delta_G(v)], \quad \overline{M}_2(G) = \sum_{uv \notin E(G)} \delta_G(u) \delta_G(v),$$

Throughout this paper, we consider a finite connected graph G that has no loops or multiple edges with vertex and edge sets $V(G)$, and $E(G)$, respectively. For a graph G , the degree of a vertex u is the number of edges incident to u , denoted by $\delta_G(u)$. The complement of G , denoted by \overline{G} , is a simple graph on the same set of vertices $V(G)$ in which two vertices u and v are adjacent, i.e., connected by an edge uv , if and only if they are not adjacent in G . Hence, $uv \in E(\overline{G})$, if and only if $uv \notin E(G)$. Obviously $E(G) \cup E(\overline{G}) = E(K_n)$, and $\overline{m} = |E(\overline{G})| = \binom{n}{2} - m$, the degree of a vertex u in \overline{G} , is the number of edges incident to u , denoted by $\delta_{\overline{G}}(u) = n - 1 - \delta_G(u)$, [5],[6]. Then, M. Khalifeh et al.[3] and K. Kiruthika [7] computed the first and second Zagreb indices of Cartesian product $G_1 \times G_2$, composition $G_1 \circ G_2$, disjunction $G_1 \vee G_2$, symmetric difference $G_1 \oplus G_2$, join $G_1 + G_2$, tensor product $G_1 \otimes G_2$, and strong product $G_1 * G_2$ of two graphs. Here we continue this line of research by exploring the behavior of the second Zagreb indices under several important operations such as join and strong product, and studying some basic mathematical operation for the first and second Zagreb indices of complement graphs such as cartesian product $G_1 \times \overline{G}_2$, composition $G_1 \circ \overline{G}_2$, disjunction $G_1 \vee \overline{G}_2$, symmetric difference $G_1 \oplus \overline{G}_2$, join $\overline{G}_1 + G_2$, tensor product $\overline{G}_1 \otimes G_2$, and strong product $\overline{G}_1 * G_2$ of two graphs. The results are applied to molecular graph of nanotorus and titania nanotubes. In recent years, there has been considerable interest in general problems of determining topological indices and their operations [8],[9],[10].

2 Preliminaries

In this section we give some basic and preliminary concepts which we shall use later.

$$1. \quad |V(G_1 \times G_2)| = |V(G_1 \vee G_2)| = |V(G_1 \circ G_2)| = |V(G_1 \otimes G_2)| = |V(G_1 * G_2)| = |V(G_1 \oplus G_2)| = n_1 n_2, \quad |V(G_1 + G_2)| = n_1 + n_2,$$

$$2. \quad |E(G_1 \times G_2)| = m_1 n_2 + n_1 m_2, \quad |E(G_1 * G_2)| = m_1 n_2 + n_1 m_2 + 2m_1 m_2 ,$$

$$|E(G_1 + G_2)| = m_1 + m_2 + n_1 n_2, \quad |E(G_1 \circ G_2)| = m_1 n_2^2 + m_2 n_1,$$

3 Main Results

In this section, we study the second Zagreb index of join and strong product of two graphs and the first and second Zagreb index of various complement graph binary operations such as cartesian product, composition, disjunction, symmetric difference, join, tensor product and strong product, of two simple connected graphs. We use the notation $V(G_i)$ for the vertex set, $E(G_i)$, $E(\bar{G}_i)$ for the edge set, n_i for the number of vertices and m_i , \bar{m}_i for the number of edges of the graph G_i , \bar{G}_i respectively. All graphs here offer are simple graphs.

Proposition 3.1: Let G be a simple graph on n vertices and m edges, then

$$M_2(\bar{G}) = \frac{1}{2}n(n-1)^3 + (n-\frac{3}{2})M_1(G) + 2m^2 - M_2(G) - 3m(n-1)^2.$$

Proof. By using Proposition 2.2, and since $\bar{m} = \binom{n}{2} - m$, then

$$\begin{aligned} M_2(\bar{G}) &= n(n-1)^3 - 4m(n-1)^2 + (n-1)M_1(G) + 2m^2 - M_2(G) - \frac{1}{2}M_1(G) \\ &\quad - (\binom{n}{2} - m)(n-1)^2 \\ &= n(n-1)^3 + (n-\frac{3}{2})M_1(G) + 2m^2 - M_2(G) - (\frac{1}{2}n(n-1) + 3m)(n-1)^2 \\ &= \frac{1}{2}n(n-1)^3 + (n-\frac{3}{2})M_1(G) + 2m^2 - M_2(G) - 3m(n-1)^2. \end{aligned}$$

Tensor product

The tensor product $G_1 \otimes G_2$, of two simple and connected graphs G_1 and G_2 is the graph with vertex set $V(G_1) \times V(G_2)$ and $E(G_1 \otimes G_2) = (u_1, u_2)(v_1, v_2) | u_1v_1 \in E(G_1) \text{ and } u_2v_2 \in E(G_2)$.

Theorem 3.2: Let G_1, G_2 be two simple connected graphs with n_1, n_2 vertices and m_1, m_2 edges, respectively, then

$$M_1(\bar{G}_1 \otimes G_2) = n_1n_2(n_1n_2 - 1)^2 - 8m_1m_2(n_1n_2 - 1) + M_1(G_1)M_1(G_2).$$

Proof. From Proposition 2.2, we have $M_1(\bar{G}) = n(n-1)^2 - 4m(n-1) + M_1(G)$, and since $M_1(G_1 \otimes G_2) = M_1(G_1)M_1(G_2)$, given in Theorem 2.3. and $|E(G_1 \otimes G_2)| = 2m_1m_2$, $|V(G_1 \otimes G_2)| = n_1n_2$ given in Lemma 2.1. then

$$\begin{aligned} M_1(\bar{G}_1 \otimes G_2) &= |V(G_1 \otimes G_2)|(|V(G_1 \otimes G_2)| - 1)^2 \\ &\quad - 4|E(G_1 \otimes G_2)|(|V(G_1 \otimes G_2)| - 1) + M_1(G_1 \otimes G_2) \\ &= n_1n_2(n_1n_2 - 1)^2 - 8m_1m_2(n_1n_2 - 1) + M_1(G_1)M_1(G_2). \end{aligned}$$

Theorem 3.3: Let G_1, G_2 be two simple connected graphs with n_1, n_2 vertices and m_1, m_2 edges, respectively, then

$$\begin{aligned} M_2(\bar{G}_1 \otimes G_2) &= \frac{1}{2}n_1n_2(n_1n_2 - 1)^3 + (n_1n_2 - \frac{3}{2})M_1(G_1)M_1(G_2) \\ &\quad + 8m_1^2m_2^2 - 2M_2(G_1)M_2(G_2) - 6m_1m_2(n_1n_2 - 1)^2. \end{aligned}$$

Proof. From Proposition 3.1. we have $M_2(\bar{G}) = \frac{1}{2}n(n-1)^3 + (n-\frac{3}{2})M_1(G) + 2m^2 - M_2(G) - 3m(n-1)^2$, and since $M_1(G_1 \otimes G_2) = M_1(G_1)M_1(G_2)$, $M_2(G_1 \otimes G_2) = 2M_2(G_1)M_2(G_2)$, given in Theorem 2.3 and Theorem 2.5 respectively, and $|E(G_1 \otimes G_2)| = 2m_1m_2$, $|V(G_1 \otimes G_2)| = n_1n_2$

given in Lemma 2.1. Then.

$$\begin{aligned}
 M_2(\overline{G_1 \otimes G_2}) &= \frac{1}{2}|V(G_1 \otimes G_2)|(|V(G_1 \otimes G_2)| - 1)^3 + (|V(G_1 \otimes G_2)| - \frac{3}{2})M_1(G_1 \otimes G_2) \\
 &+ 2|E(G_1 \otimes G_2)|^2 - M_2(G_1 \otimes G_2) - 3|E(G_1 \otimes G_2)|(|V(G_1 \otimes G_2)| - 1)^2 \\
 &= \frac{1}{2}n_1n_2(n_1n_2 - 1)^3 + (n_1n_2 - \frac{3}{2})M_1(G_1)M_1(G_2) \\
 &+ 8m_1^2m_2^2 - 2M_2(G_1)M_2(G_2) - 6m_1m_2(n_1n_2 - 1)^2.
 \end{aligned}$$

Join

The join $G_1 + G_2$, of two simple and connected graphs G_1 and G_2 is a graph with vertex set $V(G_1 + G_2) = V(G_1) \cup V(G_2)$ and edge set $E(G_1) \cup E(G_2) \cup \{uv | u \in V(G_1), v \in V(G_2)\}$.

Theorem 3.4: Let G_1, G_2 be two simple connected graphs with n_1, n_2 vertices and m_1, m_2 edges, respectively, then

$$\begin{aligned}
 M_1(\overline{G_1 + G_2}) &= (n_1 + n_2)(n_1 + n_2 - 1)^2 - 8(m_1 + m_2 + n_1n_2)(n_1 + n_2 - 1) + M_1(G_1) \\
 &+ M_1(G_2) + n_1n_2^2 + n_2n_1^2 + 4m_1n_2 + 4m_2n_1.
 \end{aligned}$$

Proof. From Proposition 2.2. we have $M_1(\overline{G}) = n(n - 1)^2 - 4m(n - 1) + M_1(G)$, and since $M_1(G_1 + G_2) = M_1(G_1) + M_1(G_2) + n_1n_2^2 + n_2n_1^2 + 4m_1n_2 + 4m_2n_1$, given in Theorem 2.3. and $|E(G_1 + G_2)| = m_1 + m_2 + n_1n_2$, $|V(G_1 + G_2)| = n_1 + n_2$ given in Lemma 2.1. Then.

$$\begin{aligned}
 M_1(\overline{G_1 + G_2}) &= |V(G_1 + G_2)|(|V(G_1 + G_2)| - 1)^2 \\
 &- 4|E(G_1 + G_2)|(|V(G_1 + G_2)| - 1) + M_1(G_1 + G_2) \\
 &= (n_1 + n_2)(n_1 + n_2 - 1)^2 - 8(m_1 + m_2 + n_1n_2)(n_1 + n_2 - 1) + M_1(G_1) \\
 &+ M_1(G_2) + n_1n_2^2 + n_2n_1^2 + 4m_1n_2 + 4m_2n_1.
 \end{aligned}$$

Theorem 3.5: Let G_1, G_2 be two graphs with n_1, n_2 vertices and m_1, m_2 edges, respectively, then

$$\begin{aligned}
 M_2(G_1 + G_2) &= M_2(G_1) + M_2(G_2) + n_2M_1(G_1) + n_1M_1(G_2) + n_2^2m_1 + n_1^2m_2 \\
 &+ 4m_1m_2 + 2m_1n_1n_2 + 2m_2n_2n_1 + n_1^2n_2^2.
 \end{aligned}$$

Proof. By Definitions of the second Zagreb index, join $G_1 + G_2$ and by Lemma 2.1. we have

$$\begin{aligned}
 M_2(G_1 + G_2) &= \sum_{uv \in E(G_1 + G_2)} \delta_{G_1 + G_2}(u)\delta_{G_1 + G_2}(v) \\
 &= \sum_{uv \in E(G_1)} \delta_{G_1 + G_2}(u)\delta_{G_1 + G_2}(v) + \sum_{uv \in E(G_2)} \delta_{G_1 + G_2}(u)\delta_{G_1 + G_2}(v)
 \end{aligned}$$

$$\begin{aligned}
& + \sum_{u \in V(G_1)} \sum_{v \in V(G_2)} \delta_{G_1+G_2}(u) \delta_{G_1+G_2}(v) \\
& = \sum_{uv \in E(G_1)} (\delta_{G_1}(u) + n_2)(\delta_{G_1}(v) + n_2) + \sum_{uv \in E(G_2)} (\delta_{G_2}(u) + n_1)(\delta_{G_2}(v) + n_1) \\
& + \sum_{u \in V(G_1)} \sum_{v \in V(G_2)} (\delta_{G_1}(u) + n_2)(\delta_{G_2}(v) + n_1) \\
& = \sum_{uv \in E(G_1)} [\delta_{G_1}(u)\delta_{G_1}(v) + n_2\delta_{G_1}(u) + n_2\delta_{G_1}(v) + n_2^2] \\
& + \sum_{uv \in E(G_2)} [\delta_{G_2}(u)\delta_{G_2}(v) + n_1\delta_{G_2}(u) + n_1\delta_{G_2}(v) + n_1^2] \\
& + \sum_{u \in V(G_1)} \sum_{v \in V(G_2)} [\delta_{G_1}(u)\delta_{G_2}(v) + n_1\delta_{G_1}(u) + n_2\delta_{G_2}(v) + n_1n_2] \\
& = M_2(G_1) + n_2M_1(G_1) + n_2^2m_1 + M_2(G_2) + n_1M_1(G_2) + n_1^2m_2 \\
& + 4m_1m_2 + 2m_1n_1n_2 + 2m_2n_2n_1 + n_1^2n_2^2.
\end{aligned}$$

Theorem 3.6: Let G_1, G_2 be two simple connected graphs with n_1, n_2 vertices and m_1, m_2 edges, respectively, then

$$\begin{aligned}
M_2(\overline{G_1 + G_2}) & = \frac{1}{2}n_1n_2(n_1n_2 - 1)^3 + (n_1n_2 - \frac{3}{2})[M_1(G_1) + M_1(G_2) + n_1n_2^2 \\
& + n_2n_1^2 + 4m_1n_2 + 4m_2n_1] + 2[m_1 + m_2 + n_1n_2]^2 - [M_2(G_1) + M_2(G_2) \\
& + n_2M_1(G_1) + n_1M_1(G_2) + n_2^2m_1 + n_1^2m_2 + 4m_1m_2 + 2m_1n_1n_2 \\
& + 2m_2n_2n_1 + n_1^2n_2^2] - 3(m_1 + m_2 + n_1n_2)(n_1n_2 - 1)^2.
\end{aligned}$$

Proof. From Proposition 3.1. we have $M_2(\overline{G}) = \frac{1}{2}n(n-1)^3 + (n-\frac{3}{2})M_1(G) + 2m^2 - M_2(G) - 3m(n-1)^2$, and since $M_1(G_1+G_2) = M_1(G_1) + M_1(G_2) + n_1n_2^2 + n_2n_1^2 + 4m_1n_2 + 4m_2n_1$, given in Theorem 2.3. $M_2(G_1+G_2) = M_2(G_1) + M_2(G_2) + n_2M_1(G_1) + n_1M_1(G_2) + n_2^2m_1 + n_1^2m_2 + 4m_1m_2 + 2m_1n_1n_2 + 2m_2n_2n_1 + n_1^2n_2^2$, given in Theorem 3.5. and $|E(G_1+G_2)| = m_1 + m_2 + n_1n_2$, $|V(G_1+G_2)| = n_1 + n_2$ given in Lemma 2.1. Then.

$$\begin{aligned}

4 Application

In this section, first and second Zagreb index have been investigated for complement titania TiO_2 nanotubes and molecular graph of nanotorus.

Corollary 4.1: The first and second Zagreb index of complement $TiO_2[n, m]$ nanotube Fig. 1. is given by

$$a. \quad M_1(\overline{TiO_2[n, m]}) = 2n(6mn + 6n - 1)[18mn(m + 1) + 18n - 23m - 19] + 4n(19m + 12),$$

$$b. \quad M_2(\overline{TiO_2[n, m]}) \\ = 3n(m + 1)(6mn + 6n - 1)^3 + 4n(6mn + 6n - \frac{3}{2})(19m + 12) \\ + 4n(5m + 4)[(10mn + 8n) - 3(6mn + 6n - 1)^2] - 2n(65m + 31).$$

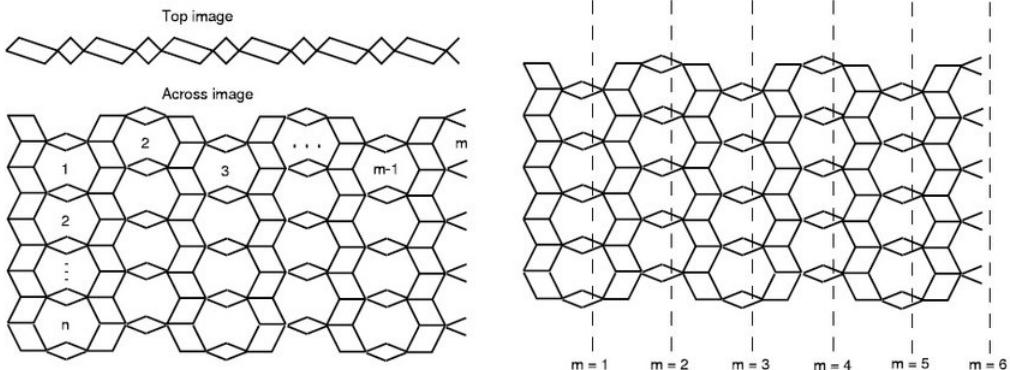

Fig. 1. The molecular graph of $TiO_2[n, m]$ nanotube

Proof. Proving item (a) by Proposition 2.2 we have

$$M_1(\overline{G}) = n(n - 1)^2 - 4m(n - 1) + M_1(G),$$

and since $M_1(TiO_2[n, m]) = 76mn + 48n$, and the partitions of the vertex set and edge set $\sum |V(TiO_2[n, m])| = 6mn + 6n$, $\sum |E(TiO_2[n, m])| = 10mn + 8n$ of titania nanotubes are given in [13, 14]. Then

$$\begin{aligned} M_1(\overline{TiO_2[n, m]}) &= \sum |V(TiO_2[n, m])|(\sum |V(TiO_2[n, m])| - 1)^2 \\ &- 4 \sum |E(TiO_2[n, m])|(\sum |V(TiO_2[n, m])| - 1) + M_1(TiO_2[n, m]) \\ &= 2n(6mn + 6n - 1)[18mn(m + 1) + 18n - 23m - 19] + 4n(19m + 12). \end{aligned}$$

Proving item(b) by Proposition 3.1 we have

$M_2(\overline{G}) = \frac{1}{2}n(n - 1)^3 + (n - \frac{3}{2})M_1(G) + 2m^2 - M_2(G) - 3m(n - 1)^2$, and since $M_1(TiO_2[n, m]) = 76mn + 48n$, $M_2(TiO_2[n, m]) = 130mn + 62n$ and the partitions of the vertex set and edge set $\sum |V(TiO_2[n, m])| = 6mn + 6n$, $\sum |E(TiO_2[n, m])| = 10mn + 8n$ of titania nanotubes

are given in [14]. Hence

$$\begin{aligned}
 M_2(\overline{TiO_2[n,m]}) &= \frac{1}{2} \sum |V(TiO_2[n,m])| (\sum |V(TiO_2[n,m])| - 1)^3 \\

 &+ 2[\sum |E(TiO_2[n,m])|]^2 - M_2(TiO_2[n,m]) \\
 &- 3 \sum |E(TiO_2[n,m])| (\sum |V(TiO_2[n,m])| - 1)^2 \\
 &= \frac{1}{2}(6mn + 6n)(6mn + 6n - 1)^3 + (6mn + 6n - \frac{3}{2})(76mn + 48n) \\
 &+ 2[10mn + 8n]^2 - 130mn - 62n - 3(10mn + 8n)(6mn + 6n - 1)^2 \\
 &= 3n(m+1)(6mn + 6n - 1)^3 + 4n(6mn + 6n - \frac{3}{2})(19m + 12) \\
 &+ 4n(5m + 4)[(10mn + 8n) - 3(6mn + 6n - 1)^2] - 2n(65m + 31).

Corollary 4.2: Let $T = T[p, q]$ be the molecular graph of a nanotorus such that $|V(T)| = pq$, $|E(T)| = \frac{3}{2}pq$, Fig. 2. Then:

$$a. \quad M_1(\overline{T[p,q]}) = pq[p^2q^2 - 8pq + 16].$$

$$b. \quad M_1(\overline{P_n \times T}) = pq[n^3p^2q^2 - 12n^2pq + 4npq + 36n - 22].$$

$$c. \quad M_2(\overline{T[p,q]}) = pq[\frac{1}{2}(pq - 1)^2(pq - \frac{11}{2}) + \frac{27}{2}pq - 27].$$

 &= pq(pq - 1)^2 - 4\frac{3}{2}pq(pq - 1) + 9pq \\
 &= pq[p^2q^2 - 8pq + 16].
 \end{aligned}$$

Proving item (b) by [3] $M_1(P_n \times T) = pq(25n - 18)$, and by using Lemma 2.1. $|E(P_n \times T)| = pq(\frac{5}{2}n - 1)$, $|V(P_n \times T)| = npq$, and by using Proposition 2.2. we get

5 Conclusion

We studied the second Zagreb index of join and strong product of two graphs and the first and second Zagreb index of various complement graph binary operations such as Cartesian product, composition, disjunction, symmetric difference, join, tensor product and strong product, of two simple connected graphs. Moreover we calculated the first and second-Zagreb index of molecular complement graph of nanotorus and titania nanotubes $TiO_2[n, m]$.
